

Children's Product Report

by

Please type in (or write) the information below each item. Use as much space as you need. Answers should be written in paragraph form.

(1) Why was an MP3 file used your product design? (No, the answer can't be because it was the assignment. :-))

(2) How did the MP3 files travel from the web site to your computer? Suppose the web site was on another continent?

(3) What might have happened if hacker packets got in the way of the transfer of your music? What other types of difficulties might the music files face as they traveled through satellite connections?

(4) Think of times before there were computers, music files, and the Internet. What would you have had to do then to create a children's product that used music?

(5) Describe your product in a short paragraph.
